CS342 · VISUAL PROGRAMMING

What Repeats 471 · 462 · 461

This term's scope: Chapter 1 and Chapter 2 up to slide 53

Muharib

What's inside

01 The scope

02 Question types

03 What to memorize

01 The scope

Included	Not included
All of Chapter 1: classes, inheritance, polymorphism, casting, packages, interfaces, exceptions	Event management (slide 55 onward)
Swing, JFrame, JPanel and layouts (flow, border, grid)	ActionListener, MouseListener, adapters
The two-number average exercise (Window2)	Dialogs and JOptionPane

02 Question types

Type	471	462	461	This term
Find Output on exceptions	✓			Included
Find Output on inheritance and casting	✓			Included
Write a window's code from a picture (layouts)	✓	✓	✓	Included
Working buttons and JOptionPane		✓	✓	Not included

So from 462 and 461 only building the window (components and layout) and the exception idea are included. Midterm 471 is fully included.

03 What to memorize

Topic	The key point
Integer.parseInt on a non-integer	NumberFormatException: letters, a space, "2.3"
A custom exception	**class X extends Exception**; **super(s)** is read by **getMessage()**; **toString()** is what **println(e)** prints
A catch inside a loop	The exception ends only that iteration; the loop continues
finally	Always runs, even after an exception or a rethrow
A downcast to the wrong type	Compiles, but ClassCastException at run time
A method the child does not override	The parent's version runs
Which override runs	By the real object (after new)
A window with several rows	GridLayout(n, 1), each row a JPanel with a FlowLayout
Default layout	JFrame → BorderLayout, JPanel → FlowLayout
Showing the window	**setVisible(true)** · **setSize(w, h)** or **pack()** · **setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE)**
