Mock Midterm

اختبار تجريبي بنفس شكل الميد · 60 دقيقة · 30 درجة

محارب

01 قبل ما تبدأ

هذا اختبار من إعدادي، مبني على شكل ميدات الدكتور الأربعة. الأسئلة جديدة والأرقام مختلفة.

- حط مؤقت 60 دقيقة.
- جهّز مسطرة وقلم رصاص لسؤال الرسم.
- اكتب كل صف في جداول Simplex، لأن كل صف عليه درجة.
- الحل في ملف منفصل. لا تفتحه إلا بعد ما تخلص.

الأسئلة 02

TRUE / FALSE · 7 M **Q1**

Answer true or false for all of the following:

1. The feasible solution space is the region that satisfies all the constraints.
2. A surplus variable is added to a ≤ constraint to make it an equation.
3. In a maximization problem, the entering variable has the most positive coefficient in the z-row.
4. If the objective function is parallel to one of the constraints, the problem may have alternative optimal solutions.
5. The leaving variable is decided by the minimum ratio test.
6. In the standard form, the right-hand side of a constraint may be negative.
7. In a basic solution, n − m variables are set equal to zero.

GRAPHICAL · 8 M

Q2

Solve the following problem graphically:

Maximum $Z = 4x_1 + 3x_2$

S.to: $x_1 + x_2 \leq 6$

$2x_1 + x_2 \leq 8$

$-x_2 \geq -5$

$x_1 \geq 0, x_2 \geq 0$

STANDARD FORM · 6 M

Q3

Given the following problem:

Minimize $Z = 5x_1 - 4x_2$

S.to $3x_1 + x_2 \leq 10$

$x_1 - 2x_2 \geq 4$

$2x_2 = -5$

$x_1 \geq 0$, x_2 unrestricted in sign.

1. What methods can be applied to solve the given linear programming problem?
2. Write the problem in standard form (equation form). "Don't solve the problem"

STANDARD FORM + SIMPLEX · 9 M

Q4

Given the following problem:

Maximize $Z = 5x_1 + 4x_2$

S.to $6x_1 + 4x_2 \leq 24$

$x_1 + 2x_2 \leq 6$

$x_1 \geq 0, x_2 \geq 0$

a) Write the problem in standard form (equation form).

b) Solve the LP problem using the Simplex method.

Basic	x_1	x_2	s_1	s_2	Sol.
